

I ❤️ #!/bin/bash

## Module 4 : Excercise

Scripts :

### Scripts :

Lets see a simple script from what we learnt so far.

- ☐ Use variable in script
- ☐ Use commands with variable
- ☐ Command line arguments

#### #use variable

```
#!/bin/bash
os="Linux"
echo "The desired operating system is : $os"
```

#### # use commands with variable and strings

```
#!/bin/bash
storage="df -h"
memory="free -g"
generic="who && uname -r"
echo "print storage & memory information of machine"
echo "-----"
echo "df results"
echo $storage
```

```
echo "-----"
echo "memory results"
echo $memory
echo "-----"
echo "generic results"
echo $generic
echo "-----"
```

## # Command line arguments

```
#!/bin/bash
cmd=$1
echo "ouput of required command"
$cmd
```
